

Accelerated transition to a sustainable energy system

Kornelis Blok

Utrecht University, Department of Science, Technology and Society

In the past decade, there have been strong developments in the area of renewable energy. In virtual all areas of renewable energy, technologies were improved. Application of wind and solar energy grew by 30 – 40% per year.

Worldwide, there is now a strong drive to further develop renewable energy sources. The developments will be described, and an outlook towards a fully sustainable energy system by the mid of this century will be presented.
