
Errata, 11 Nov 2018

- Back cover, last line:
  Zoran Mikie ⇒ Zoran Mikić

- p. xv, line 12 from below:
  Dan D’Ipolito ⇒ Dan D’Ippolito

- p. 4, last line:
  is D₂O. ⇒ contains a deuteron and a proton instead of two protons.

- p. 12, lines 3 and 2 from below:
  10⁸ ⇒ 10⁶,
  minutes ⇒ seconds

- p. 32, line 8 from above:
  similar equation above ⇒ similar equation to that above

- p. 32, line 16 from above:
  smaller ⇒ larger

- p. 35 and 36:
  Insert “sgn(q)” before “(y₀/Ω)” in Eq. (2.6)(a), before “(x₀/Ω)” in Eq. (2.6)(b), before the same terms in 2nd line above Eq. (2.7), and before “R” in Eq. (2.9)(b).

- p. 39, Eq. (2.16):
  eⁱ ⇒ eⁱ (twice)

- p. 41, Eq. (2.25):
  |q| ⇒ q

- p. 41, line below Eq. (2.27):
  q ⇒ |q|

- p. 53, lines 1 and 5 from above:
  off-diagonal ⇒ traceless,
  diagonal and off-diagonal ⇒ isotropic and anisotropic

- p. 55, lines 1 and 2 below Eq. (2.68):
  n_{e,i}(r, v, t), u_{e,i}(r, v, t) ⇒ n_{e,i}(r, t), u_{e,i}(r, t)
– p. 58, line 5 from above:
(2.82) ⇒ (2.81)
– p. 62, Eq. (2.99):
dt ⇒ dω
– p. 66, line 2 from above:
(3.51) ⇒ (3.53)
– p. 67, lines 2 and 3 from above:
dimension of ⇒ dimension of a of
– p. 77, lines 2 and 5 below Eq. (2.159):
v₁ ⇒ ξ (the displacement corresponding to v₁ = ∂ξ/∂t = −iωξ)
– p. 78, line above Fig. 2.12:
Drop “inverse of the”
– p. 98, line 7 from above:
v_A/L ⇒ L/v_A
– p. 101, after Eq. (3.71) add:
(NB: The appearance of the Boltzmann constant in these equations implies that our
transport coefficients may differ a factor k from those exploited by other authors.)
– p. 110, line 5 from below:
factors i ⇒ factors i
– p. 112, 1st line after Eq. (3.117):
ω_e ⇒ ω_{pe}
– p. 124, Eq. (3.154):
1 − γ ⇒ γ − 1
– p. 126, Eq. (3.166):
1 − γ ⇒ γ − 1
– p. 144, 2nd line of Eq. (4.42):
× (A.18) \oint vB_{tor} \cdot dl_{pol} = 0 ⇒ (A.18) \oint v \times B_{tor} \cdot dl_{pol} = 0
– p. 158, Fig. 4.8(b):
The black rectangles should not appear.
– p. 160, Eq. (4.119):
There should be no comma after the second line.

– p. 162, line 10 from below:
\( \nabla \cdot \mathbf{B} = 0 \Rightarrow \nabla \cdot \mathbf{B} = 0 \)

– p. 167, line 2 from below:
After “the slopes of the characteristics” add: “\((dt/dx)\)”.

– p. 168, Fig. 4.12(b) and text in lines 8–6 from below:
The characteristics labeled \(-c_1\) should have the label \(c_1\) and go to the right (steeper than the characteristics \(c_2\)). The corresponding text should read:
“In the \(x-t\) plane, this front is located at the position where the forward characteristics \((c_2)\) of the shocked part meet the forward characteristics \((c_1)\) of the unshocked part (Fig. 4.12(b); also see LeVeque [243], p. 29).”

– p. 182, line 10 from below:
There should be a comma after “external circuits”.

– p. 197, 3rd line of Eq. (5.48):
\( \mathcal{H} + (p) \Rightarrow (\mathcal{H} + p) \)

– p. 197, 2nd line above Eq. (5.49):
Eq. (4.62)(d) \(\Rightarrow\) Eq. (5.48)(d)

– p. 199, line 5 from above:
four factors \(\Rightarrow\) three factors

– p. 200, line 10 from above:
Fig. 2.7 \(\Rightarrow\) Fig. 2.9

– p. 208, 4th line from below:
the waves behave \(\Rightarrow\) the slow waves behave

– p. 221, below Eq. (5.110):
Drop “space part of the”.

– p. 239, line 7 below Fig. (6.6):
\( \mathbf{F}(\xi) \Rightarrow \mathbf{F}(\hat{\xi}) \) (twice)

– p. 244, line 6 from below:
\( p \) and \( B \) \(\Rightarrow\) \( p \) and \( B \)

– p. 251, line 17 from below:
\( n\pi \sin(n\pi x) \Rightarrow n\pi \cos(n\pi x) \)
identifying $\xi$ and $\eta$, $\Rightarrow$ identifying $\eta$ and $\xi^*$,

$$(\xi^* \cdot \nabla p) \nabla \cdot \xi + j \cdot \xi^* Q \Rightarrow (\xi \cdot \nabla p) \nabla \cdot \xi^* + j \cdot \xi^* \times Q$$

$p. 260$, 1st unnumbered equation:

$$\hat{\xi}^* \hat{\xi} \Rightarrow \hat{\xi}^* \cdot \hat{\xi}$$

$p. 263$, 3rd line from below:

$$\omega^2 \Rightarrow \omega$$

$p. 273$, expressions (6.119) and (6.121) should read:

$$W_f = \frac{1}{2} \int \left[ \gamma p |\nabla \cdot \xi|^2 + (\xi \cdot \nabla p) \nabla \cdot \xi^* - (\xi^* \cdot \nabla \Phi) \nabla \cdot (\rho \xi) \right] \, dV$$

$$= \frac{1}{2} \int \left[ \gamma p |\nabla \cdot \xi|^2 + \rho g \cdot (\xi \nabla \cdot \xi^* + \xi^* \nabla \cdot \xi) + g \cdot \xi^*(\nabla \rho) \cdot \xi \right] \, dV.$$
– p. 403, caption Fig. 8.11:

– p. 423, line 14 from below:
(8.20) ⇒ (8.33)

– p. 432, Fig. 9.1:
\( \mu^{-1} \Rightarrow 2\pi/\mu \);
the black spot close to \( \theta \) should not be there.

– p. 438, replace Eq. (9.24) by:
\[
\nabla = e_r \partial_r + e_\perp [(B_z/(rB))\partial_\theta - (B_\theta/B)\partial_z] + e_\parallel [(B_\theta/(rB))\partial_\theta + (B_z/B)\partial_z], \\
= e_r \partial_r + ie_\perp g + ie_\parallel f \quad ( + \text{possible terms from } \partial_\theta e_r \text{ and } \partial_\theta e_\theta),
\]

– p. 455, 3rd line below Eq. (9.78):
\[
\sqrt{k^2 + j_m'^2} \Rightarrow \sqrt{k^2 + j_m'^2/a^2}
\]

– p. 467, 2nd line from above:
(9.102) ⇒ (9.118)

– p. 506, line 16 from below:
There should be a comma after \( \{ \pm \omega_S \} \).

– p. 516, below Eq. (10.74):
\( \omega_{A2}^2 H(x_0 - x) \Rightarrow \omega_{A2}^2 H(x - x_0) \)

– p. 518, Eq. (10.79):
\( I_0(k\zeta) \Rightarrow I_0(k_0\zeta) \)

– p. 519, on 3rd line of Eq. (10.81):
\( +K_1(k_0\zeta_2) \Rightarrow -K_1(k_0\zeta_2) \)

– p. 522, on 2nd line of Eq. (10.91) and line below:
\( e^{-|\nu|t}e^{-i\omega_0t} \Rightarrow e^{-|\nu|t}e^{-i(Re\omega_0)t} \)

– p. 526, below Eq. (10.94) and above Eq. (10.97):
\( \omega^2/b_e \Rightarrow \omega^2/b_e^2 \)

– p. 526, 2nd line below Eq. (10.95):
Chapter 5 ⇒ Chapter 7

– p. 529, 4th line from above:
\( k_{xe} \Rightarrow k_{xe}^2 \)
– p. 533, 6th line from above:
Section 9.2.2 ⇒ Section 9.2.1

– p. 535, 1st and 2nd line below Eq. (11.1):
\[ \omega = \omega_d - i\delta \Rightarrow \omega = \omega_d + i\nu \]
\( \delta \) a small positive constant (0 \( \leq \delta \ll \omega_d \)) that will be discussed below. ⇒
\( \nu \) a small positive constant (0 \( \leq \nu \ll \omega_d \)) to guarantee causality (Section 11.1.2).

– p. 536, 1st line:
Section 11.1.2 ⇒ Section 11.1.3

– p. 541, line 11 from below:
assume \( \delta = 0 \) ⇒ assume \( \nu = 0 \)

– p. 541, lines 8 and 7 from below:
\( \omega = \omega_d + i\delta \) with \( \delta = 0^+ \). The role of the ‘artificial’ damping ([235], [185]) is . . .
\[ \downarrow \]
\( \omega = \omega_d + i\nu \) with \( \nu = 0^+ \). As stated in Section 11.1.1, this guarantees causality since the response of the wave amplitude (11.1) to the external driver vanishes as \( t \to -\infty \) (see also Clemmow and Dougherty [58], p. 32).

In the solution of the initial value problem for plasma oscillations by means of the Laplace transform, the corresponding Ansatz is the Landau prescription for the integration contour in the complex \( \omega \)-plane to be taken parallel to the real axis with a small positive imaginary part (Fig. 2.7(a)). To determine the asymptotic behaviour for \( t \to \infty \), this contour is to be deformed into the lower half of the \( \omega \)-plane around the branch points and zeros of the dispersion equation. This yields damped solutions. All this is not specific for the kinetic description but carries over to MHD waves, as outlined in Sections 6.3.2 (Fig. 6.11), 10.3 and 10.4.

An alternative way of treating the Alfvén singularity in the driven system is to consider a complex \( \omega = \omega_d - i\delta \) with ‘artificial’ damping coefficient \( \delta > 0 \) (Appert et al., Nuclear Fusion 22 (1982), 903). The role of this ‘artificial’ damping is . . .

– p. 542, line 4 above Fig. 11.2 and caption of that figure:
\( \delta = -0.001 \Rightarrow \delta = 0.001 \)

– p. 542, 6th line above Fig. 11.2:
\[ \ln(\frac{1}{2}X) \Rightarrow -\ln(\frac{1}{2}X) \]

– p. 542, Fig. 11.2:
The labels \( x\xi \) and \( y\xi \) in the left frames should appear as \( \xi_x \) and \( \xi_y \) inside the brackets of Im( ) in the right frames. Moreover, Re and Im should be interchanged in the bottom part of the figure: Re(\( \xi_y \)) ⇒ Im(\( \xi_y \)), Im(\( \xi_y \)) ⇒ −Re(\( \xi_y \)).
- p. 543, 5th line from below:
Poynting vector $\mathbf{S} = \frac{1}{2} \mathbf{E}^* \times \mathbf{Q} \Rightarrow$ time average $\text{Re}(\mathbf{S}) = \text{Re}(\mathbf{E}^* \times \mathbf{Q})$ of the Poynting vector

- p. 544, Eq. (11.40):
$$\left. \frac{d \epsilon_x}{dx} \right|_{x_0} \Rightarrow \left. \frac{d \epsilon_x}{dx} \right|_{x_0}
$$

- p. 546, Eq. (11.42) and line below:
$$\frac{1}{2} \int_{\hat{V}} j^*_c \cdot \hat{E}^* \, d\hat{V} \Rightarrow - \int j^*_c \cdot \hat{E}_c^* \, dS_c$$
where $\hat{V}$ denotes the volume of the vacuum region. $\Rightarrow$ where $S_c$ denotes the surface (i.e. volume with infinitesimal thickness) of the antenna.

- p. 546, 6th line below Eq. (11.42):
$$\frac{\text{Im}Q_z(c)}{\text{Im}Q_x(c)} \Rightarrow \frac{\text{Im}(\hat{Q}_z)}{\text{Im}(\hat{Q}_x)}|_{x=c}
$$

- p. 546, in Eq. (11.45):
$$\frac{1}{1 + C^2} \Rightarrow \frac{1}{\sqrt{1 + C^2}}
$$

- p. 547, Fig. 11.4:
The quantity plotted is not $C$, but $1/C$.

- p. 549, Eq. (11.48), spacing of the matrix elements should be:
$$
\left( \begin{array}{ccc}
\dfrac{d^2}{dx^2} & \dfrac{d}{dx} k \cdot B^2 \\
-k \cdot B^2 & \dfrac{d}{dx} \rho \omega^2 & \cdots
\end{array} \right)
$$

- p. 550, 2nd line above Eq. (11.51):
Maxwell $\Rightarrow$ Ampère

- p. 551:
In Eq. (11.54), the first three factors $\frac{1}{2}$ should be replaced by $\text{Re}$; all $\dot{D}$ should be replaced by $D$;
Eq. (11.55) should read:
$$
-\text{Re} \int (\mathbf{E}^* \times \mathbf{Q}) \cdot \mathbf{n} \, dS_p = \text{Re} \int \nabla \cdot (\mathbf{E}^* \times \mathbf{Q}) \, d\hat{V}
= -\text{Re} \int j^*_c \cdot \mathbf{E}_c^* \, d\hat{V} \quad \text{under} \quad \mathcal{P}_{\text{ant}}
- \text{Re} \int \hat{Q} \cdot \frac{\partial \hat{Q}^*}{\partial t} \, d\hat{V} \quad \text{under} \quad \mathcal{W}_o,
$$
In Eq. (11.56), $P_{\text{ant}}$ should read: $\text{Re}(P_{\text{ant}})$. 
– p. 552, 1st line & Eq. (11.58), p. 557, last line, p. 559, 3rd line:
\[ \dot{D} \Rightarrow \dot{D} \]

– p. 554, 8th line from the bottom:
Fig. 8.13 \Rightarrow Fig. 8.14

– p. 563, Fig. 11.12:
Upper frame: missing lines in the \( y \)-direction to be drawn as in Fig. 11.11(b).
Lower frame: missing \( x \)- and \( \omega_A \)-axes to be drawn.

– p. 580, last line:
p. 461 \Rightarrow p. 481

– p. 604, 2nd line Ref. [230]:
1159–1170 \Rightarrow 605–652
